Sign Language Interpreting in the Classroom

Introduction

Students who are deaf or hard of hearing often require classroom accommodations so they can understand and learn the material presented. Some individuals who are deaf or hard of hearing prefer communicating through sign language as opposed to writing, lip reading, or if the individual possesses residual hearing, possibly using a device to amplify sounds.

When sign language is the preferred form of communication, the services of a sign language interpreter may be arranged for the student as a reasonable and useful classroom accommodation to help the student learn and understand course content. Therefore, it is important for both students who are deaf or hard of hearing and instructors who teach these students to know how to utilize the services of an interpreter effectively.

Effective use of interpreting services requires an accurate understanding of the interpreter’s role and responsibilities as well as your own role and responsibilities as instructor when an interpreter is present in your classroom. Listed below is a brief definition of the interpreter’s job, followed by suggested guidelines that can help make the teaching process go smoothly for you, the interpreter, and most importantly, for the student. For more information on interpreting in the classroom or on teaching students who are deaf or hard of hearing, please contact Columbus State’s Office of Disability Services.

Description

A sign language interpreter is a trained professional who facilitates communication and conveys all auditory and signed information so that both hearing and deaf individuals may fully interact.

The interpreter is bound by a code of ethics, which includes keeping all material interpreted strictly confidential. In addition, interpreters are to maintain the integrity of the message, always conveying the content and spirit of the speaker. The interpreter’s mission is to facilitate communication; he/she should neither add nor delete any information at any time. Because of the specific nature of the interpreter’s role, it is important not to ask the interpreter for his/her opinion or to perform any tasks other than interpreting.

It is also important to keep in mind that sometimes, depending on the length of the class, more than one interpreter will be present. Typically, any class over two hours requires the services of two interpreters who will take turns interpreting, usually at 20-minute intervals.

Guidelines:

Helpful Hints to Remember Before Using Interpreting Services:

- **Acknowledge Interpreter’s Role.** Remember that the interpreter is in the classroom to facilitate communication for both the student and instructor. As mentioned above, he/she should not be
asked to run errands, proctor exams, or discuss the student’s personal issues. He/she should not participate in the class in any way independent of the student or express personal opinions.

- **Use Captioned Materials.** Movies and videotapes are designed to be fast paced and the information is often very dense. This means that there are many important facts or complex concepts presented with little time to process the material mentally. Please attempt to use movies or videotapes that are either open or closed captioned. One suggested resource to obtain captioned videos is the Described and Captioned Media Program (www.dcmp.org). If you must use a video that is not captioned, please inform the interpreter as far in advance as possible. Also, if you hand out a worksheet to be completed during the videotape, please understand that it is impossible for a student who is deaf to watch the video, the captioning and/or interpreter, and take notes or complete a worksheet at the same time.

- **Establish Interpreter’s Location.** When a student uses a sign language interpreter, the interpreter and student will discuss where the interpreter should be located in the classroom to provide the greatest benefit for the student while minimally distracting other class members. Keep lines of sight free for visual access to information. In class, the interpreter will attempt to position himself/herself so the student who is deaf or hard of hearing can see both the instructor and any visual aids.

- **Consider Classroom Arrangement.** For interactive situations, circles or semi-circles work best for students who are deaf or hard of hearing.

- **Share Lecture Content.** Familiarity with the subject matter will enhance the quality of the interpreted message. If possible, meet with the interpreter to share outlines, texts, agenda, technical vocabulary, class syllabus, and any other background information that would be pertinent. It has been incredibly beneficial for the interpreters to have access to the class via blackboard. In order to do this, the interpreter will provide you with their user name and you will need to email that information, along with your course id, to teaching@cscc.edu.

**Helpful Hints to Remember While Using Interpreting Services:**

- **Speak Directly to the Student.** Because the interpreter is in the classroom to facilitate communication for both the student and instructor, speak directly to and maintain communication with the student. The interpreter may request clarification from you and/or the student to ensure accuracy of the information conveyed.

- **Spell Out Technical Words.** It is helpful to have technical terms or jargon relating to a particular discipline or concept to be spelled or written out, either on the chalkboard, an overhead projector, a class handout, or with some other visual aid.

- **Speak at a Reasonable Pace.** Interpreters normally interpret with a time lag of one or two sentences after the speaker because interpreters must first process the information before relaying it. Speak naturally at a modest pace, keeping in mind that the interpreter must listen and understand a complete thought before signing it.

- **Use “I” and “You” References.** The interpreter will relay your exact words. Use personal references such as “I” and “You” when communicating with individuals who are deaf or hard of hearing. Avoid speaking of the individual in the third person; phrases such as “ask her” or “tell him” can be confusing.
• **Encourage Communicating in Turn.** It is important that only one person speak or sign at a time. The interpreting process only allows one person to communicate at a time. Therefore, encourage students to wait before speaking or signing until you recognize them.

• **Allow Ample Time for Reading.** The student cannot read and watch the interpreter at the same time. Avoid talking while students are focused on written work or overhead projections/multimedia presentations.

• **Recognize the Need for a Notetaker.** It is difficult to take good notes while lip reading or watching a sign language interpreter. Therefore, a notetaker to assist the student who is deaf or hard of hearing may be both a helpful and reasonable accommodation in these instances. The student will determine if this is beneficial in your specific class.

• **Allow Ample Time for Questions.** During class discussions or question/answer periods, give the student an opportunity to raise his/her hand, be recognized, and ask questions through the interpreter. Making time for questions allows the interpreter to finish interpreting for the current speaker and enables the student who is deaf or hard of hearing to participate in class.

• **Repeat or Paraphrase Questions and Responses.** When questions are asked, be sure to repeat or paraphrase questions before a response is given. Likewise, responses should also be repeated or paraphrased.

**Other Pointers for Effective Teaching**

• **Expectations.** Although many students with disabilities need accommodations, expect these students to perform at a level commensurate with their peers. Do not have a special grading scale or other criteria for them. Do not drastically alter or water-down your curricula for that individual.

• **Universal Design for Learning.** Universal design is an approach to designing course instruction, materials, and content to benefit people of all learning styles without adaptation or retrofitting. By incorporating Universal Design principles in instruction that allow students with disabilities access to the classroom, you may also be designing instruction that works better for everyone in the class. Classes designed with this concept in mind offer a variety of methods of content presentation, flexible teaching strategies, and options for demonstrating mastery of course content.

• **Guided Notes on the Web.** Providing students with guided notes that they can access through the Web prior to class assists them with focusing on the appropriate material. It will help them to learn more effectively in the classroom as well as take better notes.

• **Collaboration.** Don’t hesitate to call the office of Disability Services to arrange for a three-way meeting between you, a disability services counselor, and the student to work out any issues and to collaborate on the best instructional strategies for the student.
