

Supply Chain Management Associate of Applied Science (A.A.S.) 2018–2019

DESCRIPTION:

Supply Chain Management (SCM) integrates supply and demand management within and across companies. It encompasses the planning and management of the flow of goods and services and involves the movement and storage of raw materials, of work-in-process inventory, and of finished goods from point of origin to point of consumption. It includes sourcing and procurement and coordination and collaboration with channel partners, which can be suppliers, intermediaries, third-party service providers, and customers.

Supply chains cover everything from production, to product development, to the information systems needed to direct these undertakings. For more information, see csc.edu/academics/departments/supply-chain-management.
