

Network Intensive Cybersecurity Certificate

Protect the confidentiality and integrity or organizations' information and systems.

Cybersecurity professionals are the first line of defense in ensuring the confidentiality and integrity of hardware, software, and data. In this 8-week accelerated program students will gain practical knowledge and skills necessary to become comfortable with current network technologies, cyber threats, risks and controls. This course prepares the student for the Systems Security Certified Practitioner (SSCP) certification from (ISC)^{2®}. Students will take an active part in the course by applying hands-on knowledge, completing various networking and cybersecurity assignments.

Students benefit from virtual real-time instruction from an experienced instructor. Students should expect to spend up to 15–20 hours per week on coursework, depending on their level of technology background.

Course Details

Network Intensive Cybersecurity 8 Weeks | \$1,975

Prepare for SSCP Certification

This course provides students with an overview of fundamental networking concepts and cybersecurity practices that align with (ISC)^{2®}'s seven domains. The course includes test preparation for the (ISC)^{2®} Systems Security Certified Practitioner (SSCP) exam, the official SSCP Study Guide, and a certification exam voucher.

There are no additional textbook or software fees, however, students must have a laptop they can use during class and to complete homework assignments.
